

PRESS RELEASE

The design radiator product range receives an addition to the family

New head-turner: Elveo infrared radiator

A modern look with comfortable heat: With the Elveo infrared radiator, the thermal comfort specialist has expanded their bathroom and design radiator range by a pure electric version with a high radiation component. The new WRX room control unit allows simple, intelligent, and flexible temperature control for all design radiator electrical solutions. Additional radiator models, especially for a modern living environment, round off the product range providing different looks.

Organically rounded or with a geometric edge, elegant or extravagant, classic white or in brilliant colours – with their large range of shapes, colours, and designs, Kermi bathroom and design radiators optimally suit every interior design style.

NEW: Elveo infrared radiator with futuristic design

Classy, smooth, and flat is the shape language of the new pure electrically operated Elveo infrared radiator which meets the increasing demand for electrical heating solutions for efficient use of PV electricity from own production. As an infrared radiator, it provides a high proportion of cosy radiant heat. It not only heats the room air layer by layer, but the radiated surfaces and bodies in the room, thereby minimising air currents and dust dispersion.

The front of Elveo consist of single panel safety glass, as an option the back of it can be coloured black or white. An elegant surrounding frame made of sophisticated aluminium or coloured to match the radiator rounds off the modern design. For the futuristic design to come into its own, it is mounted on the wall with a very small gap. With different sizes respectively, in vertical or horizontal alignment, and output levels of up to 800 watts, Elveo is very flexible. Depending on the application, variants are available for heating the room or heating towels. It is particularly suitable for rooms, such as the kitchen or bathroom, where heat is often required quickly for a short period of time. Chrome-plated towel rails are available as an accessory for the models designed to heat towels and can be mounted with the opening on the left or right as required.

PRESS RELEASE

As soon as the product was newly introduced, Elveo won the iF Design Award in the Product class in the Building Technology category. This is awarded once a year by the renowned, independent design institution iF International Forum Design GmbH. Not only the design of the products is decisive here for the international Jury – criteria such as innovation and finish, functionality, and quality are assessed. The new Elveo infrared radiator was a winner in all areas.

NEW: WRX control unit for flexible operation of electric solutions

For all electric solutions for design radiators from Kermi, the temperature can be controlled using various control units. The flexible WRX room control unit is the new member of the product range. It allows individual climate profiles to be set up and allows several radiators to be controlled – with self-explanatory, intuitive operation and structured, standardised menu navigation. The e-ink technology of the display ensures energy-saving operation.

Convenient: As a wireless version, the WRX control unit can be easily removed from its wall holder – for comfortable, mobile operation. The room controller designed in the modern “Soft edge” look in the colours white, black, or in the colour combination black/white, matches the new Elveo infrared radiator.

Six more design radiators for modern living space

The Decor-Arte Plan, Decor-Arte Line, Decor-Arte Pure, Fineo, and Fineo Plan hot water radiators are also new in the Kermi product range. The new design radiators are made of aluminium or steel, offer very good heat output, and are also suitable for low temperature systems. They look particularly good in a modern environment – either as a minimalistic individual element or as a flat radiator, with a finely structured surface or elegant recesses, with clear profiles or with rounded edges. Various connection options, sizes, and colours allow flexible use in bathrooms or living areas.

The additions to the product range are rounded off with the Mabeo Aero. The pure electric radiator has wide, flat transverse pipes, as well as an integrated fan and is therefore particularly suitable for installation in low energy buildings and passive houses.

PRESS RELEASE

As an infrared radiator, the new Elveo provides a high proportion of cosy radiant heat. With its classy, futuristic design combined with its functionality and quality, the Elveo won the iF Design Award 2019.

The Elveo design radiator is available in different sizes in a vertical and horizontal design. The back of the ESG glass front is coloured black or white and the elegant frame is available in a choice of the radiator colour or aluminium.

The new WRX control unit offers modern, flexible control for the Kermi design radiator electrical solutions – including energy-saving E-Ink technology. The control with the “Soft Edge” design look can conveniently be removed from its holder allowing mobile use as well.
